

PVC G200

Product Profile

PVC G200 is a smooth, oriented, clear, transparent polyvinylchloride film used for protection of film negatives in photo bags.

Properties

High gloss film with good transparency.

Film has excellent in-mass antistatic properties, guaranteeing easy processing.

The very smooth film surface will prevent any potential damage to the surface of the film negative (e.g. scratching).

Better die-cutting properties are achieved through orientation.

Temperature stability up to 75°C.

The film shows a very good chemical resistance, thus avoiding all interaction with the film negatives.

The film shows a good water vapour and oxygen barrier.

Good tear resistance prevents tearing of PVC film strip.
